

Continuous Web Application Audit Confirmation

Recurity Labs confirms the successful completion of a

Penetration Test and Retest

of Business Keeper AG's Web application

BKMS® Incident Reporting

performed in 2020.

The objective of this security assessment, which has been conducted in multiple phases in 2020, was a Penetration Test of the BKMS® Incident Reporting Web application. The vulnerability checks executed were performed both manually and automatically by means of a code review, based on the methodology defined by OWASP Top 10. Furthermore, the system has been assessed dynamically on application and Operating System level. The testing and retesting activities have been executed from the premises of Business Keeper AG in Berlin, Germany.

Summarizing the last retest iteration, no known vulnerabilities, which could lead to direct exploitation or system compromise, remain unaddressed by Business Keeper. Identified issues have been mitigated according to the recommendations provided by Recurity Labs wherever possible.

Recurity Labs wants to emphasize that the code quality of the solution must be rated to be in a good condition. Business Keeper, at all times, has been cooperation with maximum transparency during the various assessment iterations, with all required and requested information delivered in a timely manner, to the full satisfaction of Recurity Labs.

Recurity Labs specializes in IT-security consulting, focusing on the most important angles of software and system security: the design and verification of expected behaviour. The company consults in high-end areas of system and code analysis with decades of field practice in system design and implementation analysis, reverse engineering, source code auditing and the improvement of existing solutions. Recurity Labs supports in designing protocols as well as software and system solutions that can withstand most common forms of attacks, tolerate the ones they cannot withstand and contain the ones they cannot tolerate. These guiding principles are also applied for professional set-up, executed and documented verifications of designs, code and application security.

This Certificate is issued by Recurity Labs and solely applies to the assessed object.
